Skills

Languages: Java, Node JS, HTML, CSS, JavaScript, SQL **Technologies / Frameworks / Libraries:** Spring Boot, MongoDB, Redis, REST APIs **Tools :** Git, GitHub **DevOps / Deployment:** AWS, Nginx, PuTTY

Work Experience

Ebitaus, Chennai

May 2024 - Present

Associate Software Engineer

- Designed and delivered enterprise-grade platforms (MeetUs, DocUS, KycUS, Aadhaar eSign Solution) with secure, scalable backends using Spring Boot and MongoDB.
- Achieved 99.9% uptime, cleared VAPT, and improved backend performance by 30% through optimized database design and clean coding.
- Led key features: AI-driven MoM voice recognition (MeetUs), dual signing (eSign + DSC) with change review & e-Stamping (DocUS), and RBI-compliant Video KYC (KycUS).
- Deployed and maintained applications on AWS (EC2, S3) with Nginx, reducing deployment time by 40% and ensuring reliable CI/CD.
- Owned DevOps operations end-to-end, including server setup, deployments, monitoring, and production support.
- Collaborated with Microsoft for Teams Marketplace integration and worked cross-functionally to deliver on-time, high-performance solutions.

Project Work

MeetUs – Meeting Management Platform

Role: Backend Developer

Tech Stack: Java, Spring Boot, MongoDB, AWS, REST APIs

- Developed the entire backend for MeetUs, a meeting management platform tailored for financial institutions and corporate borrowers.
- Enabled users to schedule meetings, auto-generate Minutes of Meeting (MoM), and maintain an audit trail for compliance and review.
- Integrated AI models for speaker voice recognition, automatically tagging speaker names with timestamps in MoM for accurate meeting records.
- Integrated seamless workflows for post-meeting actions and secure data handling using Spring Boot and MongoDB.
- Successfully deployed and published the application on the Microsoft Teams Marketplace, following platform-specific compliance and deployment standards.
- Collaborated closely with frontend and DevOps teams, ensuring secure, high-performance APIs and scalable deployment.

DocUS – Document Management & Audit Trail Platform

Role: Backend Developer

Tech Stack: Java, Spring Boot, MongoDB, External eSign APIs, REST APIs

- Developed the complete backend for DocUS, a document management platform for banks and security trustees to conduct audit trails for corporate loan documentation.
- Implemented workflows where lead banks/security trustees initiate document requests and participating banks review, update, and upload versions.
- Engineered backend logic to merge multi-bank document versions into a single tracked document, capturing all changes for transparent review.
- Integrated both eSign APIs and eMudra's DSC signature, giving users the flexibility to choose their preferred signing method.
- Implemented a change-review mechanism where customers can:
 - Review their individual changes before eSigning.
 - Compare their submissions with the finalized merged document.
 - See accepted changes highlighted within the finalized document (auto-scroll to location).
 - See rejected changes marked in red for transparency.
- Integrated an e-Stamping workflow:
 - Allowed users to request e-stamps before eSigning.
 - Built admin portal support for purchasing stamps on behalf of customers when wallets/state codes were insufficient.
- Synced status updates to enable seamless continuation of the signing process.
- Designed a secure repository system for finalized document storage and retrieval by stakeholders.

KycUS – KYC & Video KYC Platform

Role: Backend Developer

Tech Stack: Java, Spring Boot, MongoDB, Jitsi, WebRTC, REST APIs

- Built KYC and re-KYC workflows for both corporate entities and individual customers on a secure platform.
- Designed a separate Video KYC module using Jitsi server integrated with WebRTC TURN/STUN servers, ensuring compliance with RBI guidelines.
- Integrated entity and individual onboarding flows with audit trails and secure data storage.
- Ensured scalability and compliance for financial institutions handling sensitive customer identity data.

Aadhaar eSign API Solution

Role: Backend Developer

Tech Stack: Java, Spring Boot, REST APIs, Proteon eSign API

- Designed and developed an API-first solution for secure document e-signing with Aadhaar-based authentication.
- Integrated Proteon's eSign API for Aadhaar verification and digital signing workflows.
- Implemented an API Gateway to centralize authentication, request routing, and rate limiting for enhanced security and scalability.
- Built a reusable API layer, enabling seamless integration across multiple organizational products requiring secure e-signatures.

Motorbikes Service Center Management

Role: Full Stack Developer

Tech Stack: React, Spring Boot, Node.js, MongoDB

- Built a full-stack application for motorbike service centers to manage customer history, service records, and stock tracking.
- Developed role-based access control (RBAC) for admins, shop owners, and staff users.
- Implemented customer visit tracking with discount logic based on service history and consent from shop owners.
- Created a separate Node.js microservice for sending emails, reusable across multiple projects.
- Currently deployed and used by a real customer, showcasing practical adoption and business impact.

Education

Panimalar Engineering College, Chennai Bachelor of Engineering in Electronics andCommunication GPA 8.55/10.0	JUNE 2020 – APRIL 2024
SRM Institute of Science and Technology MBA – Business Administration CGPA: 9.30 (Till Date)	JULY 2024 – Pursuing

Publications

- Author of Spring Boot-related blogs on [Dev Community](#), sharing insights and best practices with the development community

Awards and Certificates

- **Programming inJava** | Sudharsanam IT Academy(Formerly NIIT)
- **Spring Boot** | Udemy
- **SQL** | Udemy
